

ABSTRACT

An assembly for connecting two adjacent liquid collection basins is provided.

The assembly includes a flume for connecting a first liquid collection basin to a second liquid collection basin. The flume comprises a generally rectangular structure having a top section, bottom section and two side sections, with an inward flange along one side of the flume and an outward flange along an opposite side of the flume. The flume is inserted through an opening in a wall of the first collection basin, through an opening in the wall of the second collection basin and affixed to each wall, in some embodiments with the use of a support frame.
